Chemistry and Physics of Lipids, 64 (1993) 287–289
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 64 (1993)

anaesthetics, history, structure properties, surrogacy, lung-surfactants, 275
analysis, lipid peroxidation, cholesterol oxidation, fatty acid oxidation, phospholipid oxidation, unilamellar, multilamellar liposomes, small unilamellar vesicles (SUV), multilamellar vesicles (MLV), 19

blood circulation, liposome, glycolipid, polyethylene glycol (PEG), tissue distribution, plasma interaction, surface potential, 249
Brownian motion, light scattering, photon correlation, polydispersity analysis, 45

Ca, diagnostic X-ray spectroscopy (DXS), liposomes, Fe, Cu, Zn, trace elements analysis, liposome quality control, 31
captured volume, liposomes, lamellarity, interdigitation-fusion vesicles, drug delivery, 197
characterization, differential scanning calorimetry, liposomes, quality control, stability, phospholipids, 128
charge effects, surface potential, membranes, ion binding, lipid bilayers, 163
cholesterol oxidation, lipid peroxidation, fatty acid oxidation, phospholipid oxidation, unilamellar, multilamellar liposomes, small unilamellar vesicles (SUV), multilamellar vesicles (MLV), analysis, 19
complement, liposomes, phagocytosis, opsonization, stealth lipids, negative charge, 239
Cu, diagnostic X-ray spectroscopy (DXS), liposomes, Ca, Fe, Zn, trace elements analysis, liposome quality control, 31
cytotoxicity, liposomes, toxicity tests, haemolysis, thrombosis, phagocytosis, pyrogenicity, 263

diagnostic X-ray spectroscopy (DXS), liposomes, Ca, Fe, Cu, Zn, trace elements analysis, liposome quality control, 31
differential scanning calorimetry, liposomes, quality control, stability, characterization, phospholipids, 128
dilution release assay, liposomes, sterically stabilized liposomes, doxorubicin delivery, liposome pharmacokinetics, liposome quality control, 219
diphenylhexatriene, parinaric acid, liposome, structure/dynamics, fluorescent probes, review, 99
distribution, gel exclusion chromatography, HPLC, liposome, vesicle aggregation, fusion, polydispersity, size, 57
doxorubicin delivery, liposomes, sterically stabilized liposomes, dilution release assay, liposome pharmacokinetics, liposome quality control, 219
drug delivery, liposomes, captured volume, lamellarity, interdigitation-fusion vesicles, 197

fatty acid oxidation, lipid peroxidation, cholesterol oxidation, phospholipid oxidation, unilamellar, multilamellar liposomes, small unilamellar vesicles (SUV), multilamellar vesicles (MLV), analysis, 19
Fe, diagnostic X-ray spectroscopy (DXS), liposomes, Ca, Cu, Zn, trace elements analysis, liposome quality control, 31
fluorescent anisotropy, fluorescent polarization, fluorescent probes, multiprobe, liposome, lipid assembly, 117
fluorescent polarization, fluorescent anisotropy, fluorescent probes, multiprobe, liposome, lipid assembly, 117
fluorescent probes, diphenylhexatriene, parinaric acid, liposome, structure/dynamics, review, 99
fluorescent probes, fluorescent polarization, fluorescent anisotropy, multiprobe, liposome, lipid assembly, 117
formation, vesicles, stability, size distribution, thermodynamics, 35
fusion, gel exclusion chromatography, HPLC, liposome, vesicle aggregation, polydispersity, size, distribution, 57

gel exclusion chromatography, HPLC, liposome, vesicle aggregation, fusion, polydispersity, size, distribution, 57
glycolipid, liposome, polyethylene glycol (PEG), blood circulation, tissue distribution, plasma interaction, surface potential, 249

haemolysis, liposomes, toxicity tests, thrombosis, cytotoxicity, phagocytosis, pyrogenicity, 263
history, structure properties, surrogacy, anaesthetics, lung-surfactants, 275
HPLC analysis of phospholipids, liposomes, phospholipids, oxidation, hydrolysis, physical stability, quality control, 3
HPLC, gel exclusion chromatography, liposome, vesicle aggregation, fusion, polydispersity, size, distribution, 57
hydrolysis, liposomes, phospholipids, oxidation, physical stability, quality control, HPLC analysis of phospholipids, 3

interdigitation-fusion vesicles, liposomes, captured volume, lamellarity, drug delivery, 197
ion binding, surface potential, membranes, charge effects, lipid bilayers, 163

lamellarity, liposomes, captured volume, interdigitation-fusion vesicles, drug delivery, 197
light scattering, photon correlation, Brownian motion, polydispersity analysis, 45
lipid assembly, fluorescent polarization, fluorescent anisotropy, fluorescent probes, multiprobe, liposome, 117

lipid bilayers, surface potential, membranes, ion binding, charge effects, 163
lipid peroxidation, cholesterol oxidation, fatty acid oxidation, phospholipid oxidation, unilamellar, multilamellar liposomes, small unilamellar vesicles (SUV), multilamellar vesicles (MLV), analysis, 19
lipidic ionophores, liposomes, osmotic volume change, permeability, permeant-solvent interaction, 187
liposome pharmacokinetics, liposomes, sterically stabilized liposomes, doxorubicin delivery, dilution release assay, liposome quality control, 219
liposome quality control, diagnostic X-ray spectroscopy (DXS), liposomes, Ca, Fe, Cu, Zn, trace elements analysis, 31
liposome quality control, liposomes, sterically stabilized liposomes, doxorubicin delivery, dilution release assay, liposome pharmacokinetics, 219
liposome, diphenylhexatriene, parinaric acid, structure/dynamics, fluorescent probes, review, 99
liposome, fluorescent polarization, fluorescent anisotropy, fluorescent probes, multiprobe, lipid assembly, 117
liposome, gel exclusion chromatography, HPLC, vesicle aggregation, fusion, polydispersity, size, distribution, 57
liposome, glycolipid, polyethylene glycol (PEG), blood circulation, tissue distribution, plasma interaction, surface potential, 249
liposomes, captured volume, lamellarity, interdigitation-fusion vesicles, drug delivery, 197
liposomes, complement, phagocytosis, opsonization, stealth lipids, negative charge, 239
liposomes, diagnostic X-ray spectroscopy (DXS), Ca, Fe, Cu, Zn, trace elements analysis, liposome quality control, 31
liposomes, differential scanning calorimetry, quality control, stability, characterization, phospholipids, 128
liposomes, NMR, vesicles, 143
liposomes, osmotic volume change, permeability, permeant-solvent interaction, lipidic ionophores, 187
liposomes, phospholipids, oxidation, hydrolysis, physical stability, quality control, HPLC analysis of phospholipids, 3
liposomes, sterically stabilized liposomes, doxorubicin delivery, dilution release assay, liposome pharmacokinetics, liposome quality control, 219
liposomes, toxicity tests, haemolysis, thrombosis, cytotoxicity, phagocytosis, pyrogenicity, 263
liposomes, vesicles, membranes, small angle X-ray diffraction, 83
lung-surfactants, history, structure properties, surrogacy, anaesthetics, 275

membranes, surface potential, ion binding, charge effects, lipid bilayers, 163
membranes, liposomes, vesicles, small angle X-ray diffraction, 83
multilamellar liposomes, lipid peroxidation, cholesterol oxidation, fatty acid oxidation, phospholipid oxidation, unilamellar, small unilamellar vesicles (SUV), multilamellar vesicles (MLV), analysis, 19
multilamellar vesicles (MLV), lipid peroxidation, cholesterol oxidation, fatty acid oxidation, phospholipid oxidation, unilamellar, multilamellar liposomes, small unilamellar vesicles (SUV), analysis, 19
multiprobe, fluorescent polarization, fluorescent anisotropy, fluorescent probes, liposome, lipid assembly, 117

negative charge, liposomes, complement, phagocytosis, opsonization, stealth lipids, 239
NMR, vesicles, liposomes, 143

opsonization, liposomes, complement, phagocytosis, stealth lipids, negative charge, 239
osmotic volume change, liposomes, permeability, permeant-solvent interaction, lipidic ionophores, 187
oxidation, liposomes, phospholipids, hydrolysis, physical stability, quality control, HPLC analysis of phospholipids, 3

parinaric acid, diphenylhexatriene, liposome, structure/dynamics, fluorescent probes, review, 99
permeant-solvent interaction, liposomes, osmotic volume change, permeability, lipidic ionophores, 187
permeability, liposomes, osmotic volume change, permeant-solvent interaction, lipidic ionophores, 187
phagocytosis, liposomes, complement, opsonization, stealth lipids, negative charge, 239
phagocytosis, liposomes, toxicity tests, haemolysis, thrombosis, cytotoxicity, pyrogenicity, 263
phospholipid oxidation, lipid peroxidation, cholesterol oxidation, fatty acid oxidation, unilamellar, multilamellar liposomes, small unilamellar vesicles (SUV), multilamellar vesicles (MLV), analysis, 19
phospholipids, differential scanning calorimetry, liposomes, quality control, stability, characterization, 128
phospholipids, liposomes, oxidation, hydrolysis, physical stability, quality control, HPLC analysis of phospholipids, 3
photon correlation, light scattering, Brownian motion, polydispersity analysis, 45
physical stability, liposomes, phospholipids, oxidation, hydrolysis, quality control, HPLC analysis of phospholipids, 3
plasma interaction, liposome, glycolipid, polyethylene glycol (PEG), blood circulation, tissue distribution, surface potential, 249
polyethylene glycol (PEG), liposome, glycolipid, blood circulation, tissue distribution, plasma interaction, surface potential, 249
polydispersity analysis, light scattering, photon correlation, brownian motion, 45
polydispersity, gel exclusion chromatography, HPLC, liposome, vesicle aggregation, fusion, size, distribution, 57
preface, 1
pyrogenicity, liposomes, toxicity tests, haemolysis, thrombosis, cytotoxicity, phagocytosis, 263

quality control, differential scanning calorimetry, liposomes, stability, characterization, phospholipids, 128
quality control, liposomes, phospholipids, oxidation, hydrolysis, physical stability, HPLC analysis of phospholipids, 3

review, diphenylhexatriene, parinaric acid, liposome, structure/dynamics, fluorescent probes, 99

size distribution, vesicles, stability, formation, thermodynamics, 35
size, gel exclusion chromatography, HPLC, liposome, vesicle aggregation, fusion, polydispersity, distribution, 57
small angle X-ray diffraction, liposomes, vesicles, membranes, 83
small unilamellar vesicles (SUV), lipid peroxidation, cholesterol oxidation, fatty acid oxidation, phospholipid oxidation, unilamellar, multilamellar liposomes, multilamellar vesicles (MLV), analysis, 19
stability, differential scanning calorimetry, liposomes, quality control, characterization, phospholipids, 128
stability, vesicles, formation, size distribution, thermodynamics, 35
stealth lipids, liposomes, complement, phagocytosis, opsonization, negative charge, 239
sterically stabilized liposomes, liposomes, doxorubicin delivery, dilution release assay, liposome pharmacokinetics, liposome quality control, 219
structure properties, history, surrogacy, anaesthetics, lung-surfactants, 275
structure/dynamics, diphenylhexatriene, parinaric acid, liposome, fluorescent probes, review, 99
surface potential, liposome, glycolipid, polyethylene glycol (PEG), blood circulation, tissue distribution, plasma interaction, 249
surface potential, membranes, ion binding, charge effects, lipid bilayers, 163
surrogacy, history, structure properties, anaesthetics, lung-surfactants, 275

thermodynamics, vesicles, stability, formation, size distribution, 35
thrombosis, liposomes, toxicity tests, haemolysis, cytotoxicity, phagocytosis, pyrogenicity, 263
tissue distribution, liposome, glycolipid, polyethylene glycol (PEG), blood circulation, plasma interaction, surface potential, 249
toxicity tests, liposomes, haemolysis, thrombosis, cytotoxicity, phagocytosis, pyrogenicity, 263
trace elements analysis, diagnostic X-ray spectroscopy (DXS), liposomes, Ca, Fe, Cu, Zn, liposome quality control, 31

unilamellar, lipid peroxidation, cholesterol oxidation, fatty acid oxidation, phospholipid oxidation, multilamellar liposomes, small unilamellar vesicles (SUV), multilamellar vesicles (MLV), analysis, 19
vesicle aggregation, gel exclusion chromatography, HPLC, liposome, fusion, polydispersity, size, distribution, 57

vesicles, liposomes, membranes, small angle X-ray diffraction, 83
vesicles, NMR, liposomes, 143
vesicles, stability, formation, size distribution, thermodynamics, 35
vesicles, stability, formation, size distribution, thermodynamics, 35

Zn, diagnostic X-ray spectroscopy (DXS), liposomes, Ca, Fe, Cu, trace elements analysis, liposome quality control, 31
